(54) Title: DATA TRANSMISSION METHOD AND SYSTEM

(57) Abstract: The invention relates to a telecommunication method and system. The system comprises a first and a second unit (100, 120) arranged to communicate with each other using a packet protocol for data transmission. At least some participating units of the transmission are identified with internet protocol addresses. The first and the second unit are arranged to activate a packet data context for data transmission between the units and to associate one packet data context for more than one internet protocol addresses.
